EDUCATION

University of Virginia, School of Engineering and Applied Science

B.S. Computer Science, Minor in Data Science

Charlottesville, VA

May 2025

GPA: 3.59

Relevant Coursework: Software Engineering, Data Structures & Algorithms, Computer Systems & Organization, Data Science Systems, Communicating with Data, Statistics, Probability, Discrete Math & Theory, Artificial Intelligence, Programming Languages, Machine Learning, Cloud Computing, Ethics Training

SKILLS

Languages: Java, Python, JavaScript, TypeScript, HTML, CSS, R, C/C++, PHP, SQL, NoSQL, SASS

Libraries and Frameworks: React.js, Node.js, Next.js, SvelteKit, Django, TailwindCSS, Prisma, pandas, scikit-learn, TensorFlow, Keras, GSAP, Framer Motion

Technology and Methodologies: Figma, Git, Postman, Jupyter, Google Colab, Google Apps Script, cPanel, Agile Methodologies, REST Services, CI/CD Techniques, Cloud Development, Full Stack Development, JIRA, Vercel, AWS S3, MongoDB

WORK EXPERIENCE

University of Virginia School of Engineering and Applied Science Tutor, UVA

Sep 2024 – May 2025

- Tutored 2-3 undergraduate students a week in 1+ hour sessions in the courses Data Structure and Algorithms, Computer Systems Organization, Calculus I, II and III, and Discrete Math and Theory.

Software Developer Intern, WattBuild, Charlottesville, VA

Jun 2024 – Nov 2024

- Redesigned the interface and underlying logic for a web tool that tracks current energy usage, allowing users to select from 20+ appliance types and models to explore solar-based energy options. Addressed 5+ critical bugs from previous version improving stability and robustness.
- Collaborated with supervisor in an iterative design process, creating 50+ wireframes across 10+ pages, modals, and tabs in Figma to ensure accurate translation of requirements into functional UI. Designed WattBuild UI Guide and implemented 10+ reusable UI components.
- Implemented using TypeScript, Svelte/SvelteKit, typeORM, PostgreSQL, and TailwindCSS ensuring seamless integration with existing systems.

RELEVANT PROJECTS AND PUBLICATIONS

[Developer Portfolio Website](#)

May 2025 - Present

- Developed a personal portfolio with a custom CMS using TypeScript, Next.js, GSAP, and TailwindCSS, leveraging SSR and static generation for pages, with dynamic content editable via an admin interface.

[Organization of Young Filipino Americans at UVA Official Website](#)

Fall 2023 - May 2025

- Finished migrating original website to React.js using Vite and React Router. Wrote 20+ pages of clear documentation to aid future students in learning web development. Reduced initial page load by 20–40% through module splitting and image optimization.
- Moved to a Client-Server Architecture introducing the website's first backend, which was designed as a RESTful API in PHP. Built into the API a request-response cycle, a routing mechanism that allows routers and the functions called at specific endpoints to be added efficiently, and a middleware stack system allowing authentication middleware which uses JWT to protect restricted endpoints.
- Deployed backend to a subdomain to handle data retrieval and manipulation of our MySQL database. Built the merchandise page that uses the endpoints to get and manipulate the data by authorized users from the frontend.
- Configured and deployed the website through the organization's shared hosting provider which used cPanel, using .htaccess rules to route URLs correctly ensuring 10+ sensitive files and endpoints were protected from unauthorized access.

Senior STS Thesis – Published in UVA Libra: [“Expertise and Policy Influence of W3C’s Web Content Accessibility Guidelines \(WCAG\)”](#)

May 2025

College Apartment Listing Website

Fall 2023

- Collaborated with a team of 5 to design and build a website, employing scrum methodology for a course's final project. Built using Django, Bootstrap5, jQuery, Google Maps API, and deployed on Heroku with Git as the version control.
- Adopted agile approach meeting once a week to discuss progress in each sprint, current schedule, and assigned/reassigned tasks using Jira.
- Implemented CI/CD pipeline integrating JUnit and Selenium for automated testing.
- Built the apartment listing Model, View, and Template; Served as the team's UI/UX designer developing original mockup with 5+ wireframes as well as conducting interviews with 5 beta testers to improve overall experience.

ETL Pipeline and Analysis of Super Bowl Data

Fall 2023

- Implemented an ETL pipeline to process and analyze Super Bowl data from a variety of sources including both structured and unstructured data from two SQL databases, csv, and public API data. Compiled into an organized data warehouse with a fact table and several dimension tables to make analysis easier. Queried results and examined correlations/trends using graphs.

LEADERSHIP, HONORS, AND EXTRACURRICULAR ACTIVITIES

Organization of Young Filipino Americans at UVA, Webmaster

March 2023 – Mar 2024

- Utilized Google Workspace, Apps Script, and Excel to create tools for my 30+ board and council executives that assisted in tasks such as mass sending 300+ emails to members, tracking 100+ food orders, and organizing 35 years of organizational records.
- Planned and managed event *Filipino Food Night* which served cultural dishes to more than 150 patrons from UVA and the greater Charlottesville community. Raised over \$1,000 towards the organization's annual scholarship.
